Product Update Alfresco Release 2.0

Next Generation Parallel, Federated Search, Application Exchange Foundation Support and Multi-Language Content Architecture

The focus of Alfresco has always been to deliver the industry leading Open Source Enterprise Content Management Suite. Today users want the simplicity of a departmental solution, with simple to configure applications, whilst corporations want the consistent control and compliance of an open, scalable, robust Java based Enterprise Content Management system. Alfresco 2.0 is a major step in bringing these two requirements together making it simple to create, access and search a shared application space for:

- Documents
- Web and Rich Media assets
- Records
- Images
- Collaborative Content – Blogs and Wikis

Alfresco 2.0 focuses on extending the suite to provide:

- Web Content Management Network Release
- OpenSearch – Parallel, Federated, Secure Search
- Application Exchange Packaging Infrastructure
- Multi-Language Content Architecture

Search

To offer departmental simplicity it is important to be able to simply search across multiple repositories in a loosely-coupled, federated way. Alfresco now enables this through the OpenSearch standard. The new functionality offered includes:

- AutoDiscovery- Firefox 2 and IE7 support to AutoDiscover Alfresco as an OpenSearch repository
- Simple Browser Search – Drop down Alfresco repository search
- Full Page and Content Support – HTML, RSS and ATOM support

The Alfresco Web Client offers:

- Parallel, Asynchronous Search – Simply search across multiple Alfresco repositories
- Secure Search – Single Sign-On secure search retaining local security
- Federated Search – Search across Alfresco and other RSS or Atom repositories including Blogs and Wikis

Alfresco Application Exchange

Alfresco 1.3 delivered a simple open source platform for ECM application development. It is critical to be able to rapidly develop and share simple applications at a departmental or corporate level. Alfresco 2.0 offers the Alfresco Module Package (AMP). AMP-enabled applications can be simply packaged and shared within an

Alfresco Application Exchange

- ❖ Alfresco Module Package (AMP)
- ❖ AMP Package for:
 - Code
